Hi-Fidelity Prototype

GREAT ONES!

It's time to ...

EVALUATE your high-fidelity prototype by usability testing for at least 5 participants based on your persona

1. Consent form
2. Introductory script
3. Scenarios: at least X tasks that each participant needs to do during usability testing
 - X = the number of group members
 - Tasks represent main functionalities of your application
4. Pre-test: design contextual questions to obtain participant profile such as gender, age range, time spent on Internet, etc.
5. Conduct the test: record, observe, take a note, remind user to “think a loud”
6. Post-test: SEQ, SUS, additional questions related to user experience and usability goals
7. Analysis: List of findings and revision needed

Deliverables

- One concise report in document format and one amazing presentation
- Naming convention

4_Evaluation_GroupID_ClassID e.g.

4_Evaluation_G09_K3.doc(x)

4_Evaluation_G09_K3.ppt(x)

- Upload **TWO** separate files (**NOT in a zipped**) to **Edunex** before **24 November 2022 23.55**
