Discover & Requirement

Low-Fidelity Prototype

30 Oct

Task Description

- for the identified N most essential requirements, articulate the **design ideas** to achieve their usability and UX goals
- develop a **low-fidelity prototype** that you believe will satisfy the main requirements, attain goals and bring your design ideas to life

For the report, you will need to describe the conceptual model

- A conceptual model is:

“...a high-level description of how a system is organized and operates” (Johnson and Henderson, 2002, p26)

- A conceptual model enables:

“...designers to straighten out their thinking before they start laying out their widgets” (Johnson and Henderson, 2002, p28)

- Provides a working strategy and framework of general concepts and their interrelations

The conceptual model provides:

- What tasks the users will be able to conduct with the app
- The objects that they will work with within the app
- The relationships that those objects have to each other
- The actions that users can take using the objects
- The attributes associated with each object
- The language used to describe objects, attributes, etc.

For the report, you will also need to illustrate the conceptual model with user/customer journey.

- The customer journey is the complete sum of experiences that customers go through when interacting with an interactive product.
- Instead of looking at just a part of a transaction or experience, the customer journey documents the full experience of being a customer.
- You may use the following as the template for your user/customer journey map

Read Chapter 12: Design, Prototyping and Construction

Deliverables

One concise report in document format and one **amazing presentation**, including:

1. Cover: Title & group identity
2. Problems (You can describe the problem precisely rather than the previous milestone; 2-3 pages)
3. Group Result
 - a. Brief description of the conceptual model of your system (1 page)
 - b. User/Customer Journey map (as needed to illustrate the conceptual model)
 - c. At least N-Requirements of the application, each should have
 - Descriptions (in 5-6 sentences) what this functionality is supposed to do
 - The most important usability goals
 - Design ideas to achieve the above goals (3-5) sentences
 - d. The most crucial user experience goal
4. N-Individual Results, each should have
 - a. **A series of screens and/or interaction** (preliminary, low-fidelity) designs that will implement a requirement.
 - b. For each screen/interaction design, provide a concise and yet complete description of your design, including a description of **how your design ideas translate into screen/interaction design**.
 - c. **Person in Charge** for working on this requirement

Deliverables

- One concise report in document format and one amazing presentation
- Naming convention

2_PreliminaryDesign_GroupID_ClassID e.g.

2_PreliminaryDesign_G09_K3.doc(x)

2_PreliminaryDesign_G09_K3.ppt(x)

- Upload **TWO** separate files (**NOT in a zipped**) to **Edunex** before **30 October 2022 20.02**
