Discover, Requirement and Low-fi

High Fidelity Prototyping

Prototype looks more like the final system than a low-fidelity version

Uses materials that you would expect to be in the final product

Can be developed by integrating existing hardware and software components

Task Description

- based on your previous work in preliminary design(low-fidelity prototype), develop a **high-fidelity prototype** for your applications.
- the prototype must be a **runnable program** and should provide a wide range of functions as you have proposed although each function might still have little detail (i.e., horizontal compromise).

Deliverables

Each group must present a **live demo** of the high-fidelity prototype during the class meeting **on 14, 18 and 21 November 2022**. The live demo **must** include **all the functions designed in low-fidelity**.

One concise report in document format and one **amazing presentation**, including:

1. Cover: Title & group identity
2. Group Result
 - a. Short descriptions about scope of the application and its interaction problems (1 page).
 - b. Metaphor and Conceptual Model (both in a short descriptions, 1 page).
 - c. At least N-requirements of the application, each should have:
 - a. Short descriptions (in 2-3 sentences) what this functionality is supposed to do.
 - b. The most important usability goals.
 - d. The most crucial user experience goal.
3. N-Individual Results, each should have
 - a. **A series of screens and/or interaction** (high-fidelity) designs that will implement a requirement.
 - b. For each screen/interaction design, provide a concise and yet complete description of your design, including description of **how your low-fidelity design transform into high-fidelity** and **justification of design related to usability and UX goals**.
 - c. **Person in Charge** for working on this requirement.

Deliverables

- One concise report in document format and one amazing presentation
- Naming convention

3_DetailDesign_GroupID_ClassID e.g.

3_DetailDesign_G09_K3.doc(x)

3_DetailDesign_G09_K3.ppt(x)

- Upload **TWO** separate files (**NOT in a zipped**) to **Edunex** before **13 November 2022 23.59**
